Examples of Thermodynamics Van Wylen 7th Exercises Solutions

Below, we present detailed solutions to representative exercises, illustrating the step-by-step approach.

Example 1: Work Done in an Isothermal Expansion of an Ideal Gas

Problem Statement:

An ideal gas undergoes an isothermal expansion at 300 K from an initial volume of 1 m^3 to a final volume of 3 m^3. Calculate the work done by the gas during this process.

Solution:

Step 1: Identify Known Data

- Temperature, T = 300 K
- Initial volume, V? = 1 m^3
- Final volume, V? = 3 m^3
- Ideal gas constant, R = 8.314 kJ/kmol·K (or use specific gas constant depending on the gas)

Step 2: Determine the Gas Constant for the Gas

Assuming the gas is air with molar mass M ? 28.97 g/mol, the specific gas constant:

R_specific = R / M ? 8.314 / 0.02897 ? 287 J/kg·K

Step 3: Apply the Work Formula for Isothermal Process

For an ideal gas undergoing an isothermal process:

$$ W = nRT \ln \frac{V_2}{V_1} $$

Alternatively, using specific quantities:

$$ W = m R_{specific} T \ln \frac{V_2}{V_1} $$

Assuming unit mass (m=1 kg):

$$ W = 1 \times 287 \times 300 \times \ln(3/1) $$

Calculating:

$$ W ? 287 \times 300 \times 1.0986 ? 287 \times 329.58 ? 94,675 \text{ J} $$

Answer:

The work done by the gas is approximately 94.7 kJ.

Step 4: Final Verification

- The work is positive, indicating work done by the gas during expansion.
- Units are consistent.
- The result aligns with thermodynamic principles for isothermal expansion.

Example 2: Entropy Change in a Heating Process

Problem Statement:

A 2 kg block of water is heated from 20°C to 100°C in a constant pressure process. The specific heat capacity of water is 4.18 kJ/kg·K. Calculate the entropy change of the water.

Solution:

Step 1: Convert Temperatures to Kelvin

- T? = 20°C = 293.15 K
- T? = 100°C = 373.15 K

Step 2: Use the Entropy Change Formula for a Reversible Heating Process

$$\Delta S = m c_p \ln \frac{T_2}{T_1}$$

Step 3: Substitute Values

$$\Delta S = 2 \times 4.18 \times \ln \frac{373.15}{293.15}$$

Calculate the logarithm:

$$\ln \left(\frac{373.15}{293.15} \right) ? \ln(1.273) ? 0.241$$

Now, compute:

$$\Delta S ? 2 \times 4.18 \times 0.241 ? 2 \times 1.007 ? 2.014 \text{ kJ/K}$$

Answer:

The entropy of the water increases by approximately 2.01 kJ/K.

Examples of Typical Exercises and Their Solutions

To illustrate the depth and utility of Van Wylen?s solutions, let?s consider an example exercise typical for the textbook, along with an overview of its comprehensive solution.

Example Exercise: Isentropic Expansion of an Ideal Gas

Problem Statement:

A piston-cylinder device contains 0.5 kg of an ideal gas initially at 300 K and 200 kPa. The gas undergoes an isentropic expansion to a final pressure of 100 kPa. Determine:

a) The final temperature of the gas.

b) The work done during the process.

Step 1: Restate Known Data and Find Unknowns

- Initial state:
- $P_1 = 200\, \text{kPa}$
- $T_1 = 300\, \text{K}$
- $m = 0.5\, \text{kg}$

- Final pressure:
- $P_2 = 100\, \text{kPa}$

- Unknowns:
- T_2: Final temperature.
- W_{12}: Work done by the gas.

Step 2: Recognize the Process Type

- Isentropic expansion of an ideal gas suggests:

\[

PV^\gamma = \text{constant} \quad \text{or} \quad T P^{1-\gamma} = \text{constant}

\]

where \(\gamma \) is the specific heat ratio.

Step 3: Calculate Final Temperature \(T_2 \)

Using the relation:

\[

\frac{T_2}{T_1} = \left(\frac{P_2}{P_1}\right)^{(\gamma - 1)/\gamma}

\]

Assuming the gas is air, \(\gamma = 1.4 \).

Calculations:

\[

T_2 = 300\, \text{K} \times \left(\frac{100}{200}\right)^{(0.4/1.4)} = 300\, \text{K} \times (0.5)^{0.2857}

\]

\[

T_2 \approx 300\, \text{K} \times 0.814 = 244.2\, \text{K}

\]

Result: The final temperature is approximately 244.2 K.

Step 4: Calculate Work Done \(W_{12} \)

For an ideal gas undergoing an isentropic process:

\[

W_{12} = m R (T_1 - T_2)

\]

Where:

- \(R \) = specific gas constant for air \(\approx 0.287\, \text{kJ/kg·K} \).

Calculations:

\[

W_{12} = 0.5\, \text{kg} \times 0.287\, \text{kJ/kg·K} \times (300\, \text{K} - 244.2\, \text{K}) \approx 0.5 \times 0.287 \times 55.8

\]

\[

W_{12} \approx 0.5 \times 16.02 = 8.01\, \text{kJ}

\]

Result: The work done by the gas during expansion is approximately 8.01 kJ.

Step 5: Verify and Interpret Results

- The temperature decrease aligns with the expectation for expansion.
- The work value makes physical sense for the given mass and conditions.

Solution:

Given:

V = 2 L

C = 0.5 mol/L

Using the formula:

$$
\text{Moles of solute} = C \times V
$$

$$
\text{Moles} = 0.5 \, \text{mol/L} \times 2 \, \text{L} = 1 \, \text{mol}
$$

Problem 2: Mass Percent Calculation

Question:

A solution contains 10 grams of sugar dissolved in 90 grams of water. What is the mass percent of sugar in the solution?

Solution:

Total mass of solution = 10 g + 90 g = 100 g

Mass percent of sugar:

$$
\frac{\text{Mass of sugar}}{\text{Total mass of solution}} \times 100 = \frac{10}{100} \times 100 = 10\%
$$

Answer:

The solution has a 10% sugar concentration by mass.

Problem 3: Molarity from Mass and Volume

Question:

How many grams of NaOH are needed to make 1 liter of a 0.25 M solution?

C = 0.25 mol/L

Calculate moles of NaOH:

$$
\text{Moles} = 0.25 \, \text{mol}
$$

Calculate grams:

$$
\text{Mass} = \text{moles} \times \text{molar mass} = 0.25 \times 40 = 10\, \text{g}
$$

Answer:

10 grams of NaOH are required.

Problem 4: Dilution Calculation

Question:

You have 100 mL of a 1 M solution of HCl. How much water must you add to dilute it to 0.2 M?

$$

Given:

$C_1 = 1\, \text{M}$

$V_1 = 100\, \text{mL}$

$C_2 = 0.2\, \text{M}$

Find V_2:

$$
V_2 = \frac{C_1V_1}{C_2} = \frac{1 \times 100}{0.2} = 500\, \text{mL}
$$

Amount of water to add:

$$
V_{\text{water}} = V_2 - V_1 = 500\, \text{mL} - 100\, \text{mL} = 400\, \text{mL}
$$

Answer:

Add 400 mL of water to dilute the solution to 0.2 M.

Problem 5: Calculating Molarity from Mass and Volume

A 5 g sample of potassium permanganate (KMnO?) is dissolved in 250 mL of solution. What is its molarity?

Solution:

Molar mass of KMnO? ? 158 g/mol

Calculate moles:

$$
\text{Moles} = \frac{\text{Mass}}{\text{Molar mass}} = \frac{5}{158} \approx 0.0316\, \text{mol}
$$

Convert volume to liters:

$$
V = 250\, \text{mL} = 0.25\, \text{L}
$$

Calculate molarity:

$$
C = \frac{\text{moles}}{\text{volume in liters}} = \frac{0.0316}{0.25} = 0.1264\, \text{M}

Mass of NaCl:

$$
8\% \times 1200\, \text{g} = 96\, \text{g}
$$

Moles of NaCl:

$$
\frac{96}{58.44} \approx 1.64\, \text{mol}
$$

Molarity:

$$
\frac{1.64\, \text{mol}}{1\, \text{L}} = 1.64\, \text{M}
$$

Answer:

Step 2: Moles of NaOH:

= 0.1 mol/L × 0.025 L = 0.0025 mol

Step 3: Moles of HCl required = moles of NaOH (1:1 ratio): 0.0025 mol

Step 4: Volume of HCl solution needed:

V = moles / concentration = 0.0025 mol / 0.1 mol/L = 0.025 L

Step 5: Convert to mL:

0.025 L × 1000 = 25 mL

Answer:

25 mL of 0.1 M HCl is needed to neutralize 25 mL of 0.1 M NaOH.

QuestionAnswer What is the purpose of solving chemistry solution concentration practice problems? They help students understand how to calculate the concentration of solutions, such as molarity, molality, or percent composition, and improve their problem-solving skills in chemistry. How do I calculate molarity given the amount of solute and solvent volume? Molarity (M) is calculated by dividing the number of moles of solute by the volume of solution in liters: M = moles of solute / liters of solution. What is the key step in converting grams of solute to moles for concentration calculations? The key step is to use the molar mass of the solute to convert grams to moles: moles = grams / molar mass. How do I determine the percent concentration of a solution? Percent concentration is calculated as (mass of solute / total mass of solution) × 100%, or for volume-based solutions, (volume of solute / total volume) × 100%. What are common mistakes to avoid when solving solution concentration problems? Common mistakes include using incorrect units, forgetting to convert grams to moles, mixing up volume units, or misapplying the formula. Always double-check units and calculations. How can I practice to improve my skills in solving solution concentration problems? Practice with a variety of problems, review step-by-step solutions, understand the underlying concepts, and use online quizzes or flashcards to

reinforce learning. What is the significance of the answer key in chemistry practice problems? The answer key helps verify your solutions, understand correct methods, and identify areas where you need further practice or clarification. Are there any online resources for free chemistry solution concentration practice problems with answer keys? Yes, websites like Khan Academy, ChemCollective, and educational platforms offer free practice problems along with detailed solutions and answer keys to aid learning.
