- To understand human impacts and develop mitigation strategies
- To inform policy and sustainable development planning

What is the ISA Evaluative Task?

The ISA (International Scientific Assessment) evaluative task on biodiversity is a systematic process designed to quantify and interpret biodiversity data within a specified region or ecosystem. It involves collecting, analyzing, and synthesizing ecological information to produce a comprehensive picture of biodiversity status and trends.

The core objectives include:

- Measuring species richness and abundance
- Identifying threatened or endangered species
- Assessing habitat quality and fragmentation
- Tracking changes over time and predicting future trends

Components of the Evaluative Framework

The evaluation process generally involves several key components, each critical for a holistic understanding:

1. Data Collection and Sampling
