Scope of the Coding System

John Crane's material coding encompasses a wide array of materials including:

- Elastomers (e.g., Nitrile, Viton, EPDM)
- Polymers and plastics (e.g., PTFE, PEEK)
- Metals and alloys (e.g., stainless steel, bronze)
- Specialty materials for aggressive environments (e.g., FKM, FFKM)

Structure of John Crane Seal Material Codes

The coding system generally combines alphanumeric characters that encode critical information about the material's composition, grade, and specific properties. While the exact structure can vary depending on the material family, common elements include:

- Material Type Identifier: Denotes the general class (e.g., elastomer, thermoplastic).
- Material Grade/Specification: Indicates specific formulation or grade.
- Additional Modifiers: May include indications of color, reinforcement, or treatment.

Typical Format

An example code might appear as "VITON A" or a more detailed code such as "VTR 75", where:

- "VITON" indicates the elastomer family (FKM rubber).
- "A" or "75" specifies the grade or formulation.

In some cases, codes are numerical, such as "NBR 70", where:

- "NBR" designates Nitrile Butadiene Rubber.
- "70" refers to the hardness in Shore A.

The coding conventions are designed to be concise yet comprehensive, allowing for quick identification and specification.
